How to run iOS Simulator to run Flutter apps using Android Studio

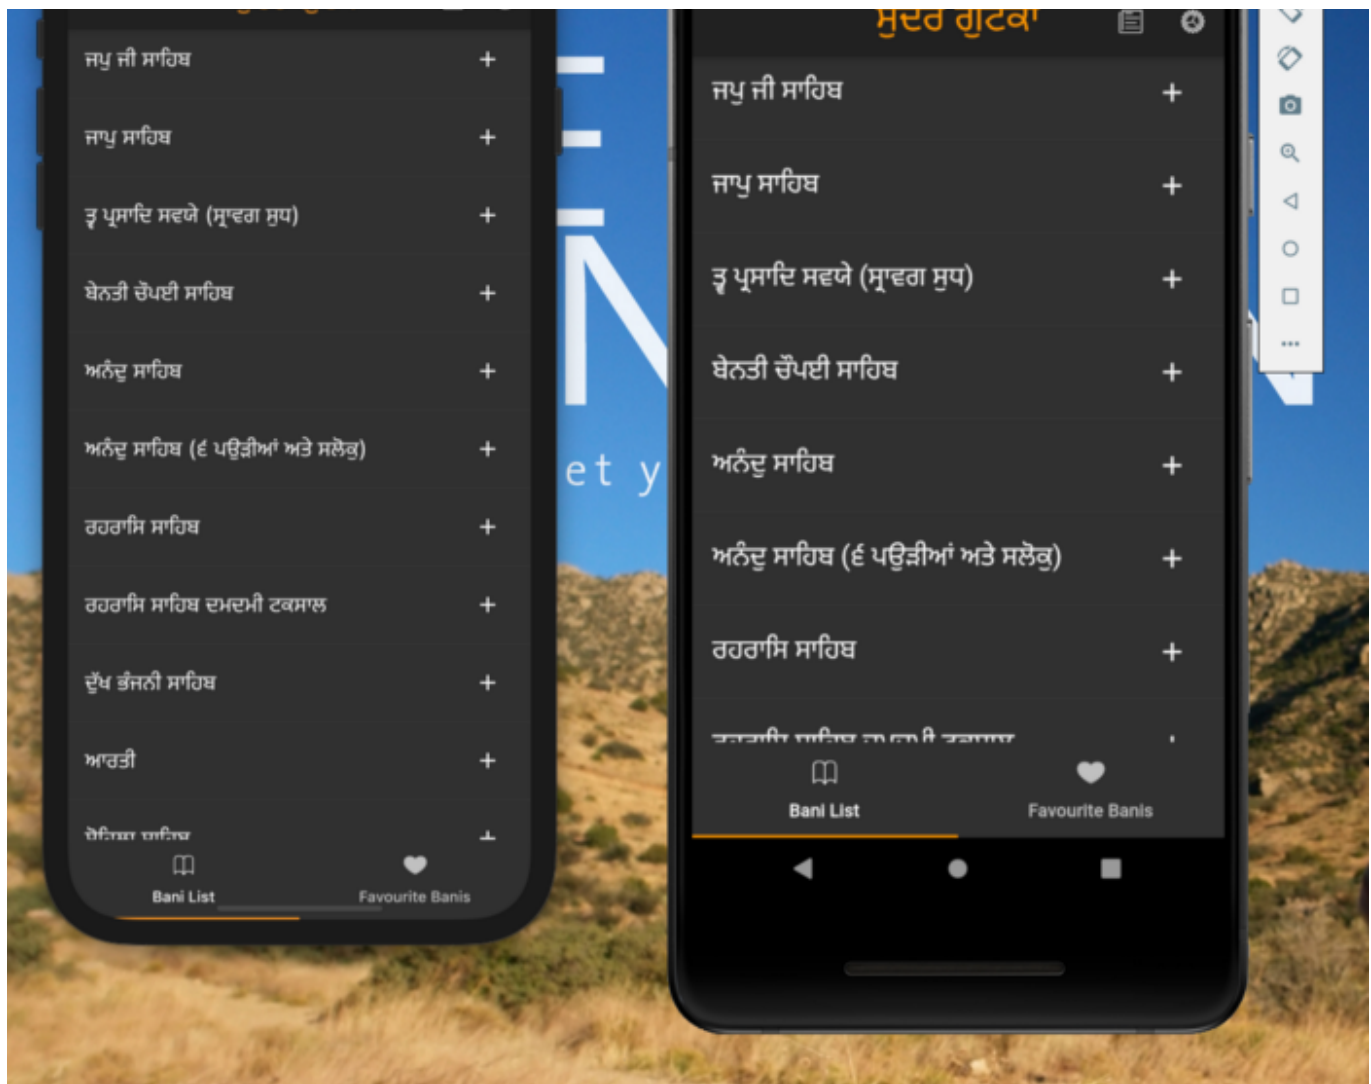

Harman Bhutani Jan 3 · 1 min read ★

You'll learn how to set up Xcode Simulator when working with Flutter in Android Studio. I found that many people are not aware of this so I penned down this article!

This is the app that I developed using flutter, link for the app is available at end of the article.

iOS setup

Firstly, you have to install Xcode on your MacBook to develop Flutter apps for iOS.

Secondly, you configure the Xcode command-line tools to use the newly-installed version of Xcode by running the following from the command line:

```
$ sudo xcode-select --switch
/Applications/Xcode.app/Contents/Developer
```

Thirdly, run your flutter app with the below command

```
open -a Simulator
```

or you use the Android studio run button.

Thanks for reading my article. You can connect with me on [Linkedin](#).

The link to the above app in the screenshot — [Google Play](#).
